

Week 5 Practice Activities

1. Look at the AI-generated weird_data csv file. Is there a relationship between the hours of sleep someone gets and the number of alien encounters they have had? What is the best way to visualize this?
2. How many people said each shape was their favorite? Should you plot this with a bar plot, a column plot, a box plot, or a violin plot?
3. Which day of the week had the highest cheese score? What about proportions instead of raw count? How should you plot this?
4. Can you plot paranoia level by coffee intake? Can you bootstrap confidence intervals as well?
